Tristar PT Flowsheets

Deployment Setup Guide

This guide walks you through deploying your Tristar PT Flowsheets app using GitHub, Supabase, Microsoft SSO, and Vercel. Follow each step in order.

Step 1: Set Up the Supabase Database

1. Go to **supabase.com** and open your project dashboard.
2. Click **SQL Editor** in the left sidebar.
3. Click **New Query**.
4. Open the file **supabase/migration.sql** from the project folder. Copy the entire contents and paste it into the SQL editor.
5. Click **Run** (or Ctrl+Enter). This creates all tables: profiles, clinics, patients, visits, audit_log, plus seed data and Row Level Security policies.
6. Verify by clicking **Table Editor** in the sidebar. You should see the 5 tables with 24 sample patients.

Step 2: Configure Microsoft SSO (Azure AD)

This connects your Microsoft 365 / Azure AD accounts so staff can sign in with their existing work credentials.

A. Register an App in Azure AD

1. Go to **portal.azure.com** and sign in with your admin account.
2. Navigate to **Azure Active Directory** (or search "App registrations").
3. Click **New registration**.
4. Name: **Tristar PT Flowsheets**
5. Supported account types: **Accounts in this organizational directory only** (Single tenant)
6. Redirect URI: Select **Web** and enter:

```
https://xfymaficakhjoxhiqjlf.supabase.co/auth/v1/callback
```

7. Click **Register**.
8. On the app overview page, copy the **Application (client) ID** and **Directory (tenant) ID**.

B. Create a Client Secret

1. In your app registration, go to **Certificates & secrets**.
2. Click **New client secret**. Description: "Supabase Auth". Expiry: 24 months.
3. Click **Add**. Copy the **Value** immediately (it won't be shown again).

C. Set API Permissions

1. Go to **API permissions** in your app registration.
2. Click **Add a permission** > **Microsoft Graph** > **Delegated permissions**.
3. Add: **email**, **openid**, **profile**.
4. Click **Grant admin consent**.

D. Configure Supabase

1. In your Supabase dashboard, go to **Authentication** > **Providers**.
2. Find **Azure** and toggle it on.
3. Enter your **Application (client) ID**, **Client Secret** (the Value), and **Azure Tenant URL**:

   ```
   https://login.microsoftonline.com/YOUR_TENANT_ID
   ```

   (Replace YOUR_TENANT_ID with the Directory ID you copied.)
4. Click **Save**.

Step 3: Push to GitHub

Open a terminal/command prompt in the **tristar-pt-flowsheets** folder and run:

```
git init
git add .
git commit -m "Initial commit - Tristar PT Flowsheets"
git branch -M main
git remote add origin https://github.com/jblack4vols/tristar-pt-flowsheets.git
git push -u origin main
```

*Note: Create the repo on GitHub first at github.com/new (name: **tristar-pt-flowsheets**, private, no README).*

Step 4: Deploy on Vercel

1. Go to **vercel.com** and sign in with your GitHub account.
2. Click **Add New Project**.
3. Import your **tristar-pt-flowsheets** repository.
4. Framework Preset: **Vite** (should auto-detect).
5. Under **Environment Variables**, add:

```
VITE_SUPABASE_URL = https://xfymaficakhjoxhiqjlf.supabase.co
VITE_SUPABASE_ANON_KEY = eyJhbGci...your-full-key
```

6. Click **Deploy**. Vercel will build and give you a live URL.
7. Copy the Vercel URL (e.g., **tristar-pt-flowsheets.vercel.app**).

Step 5: Update Redirect URLs

After Vercel gives you a URL, update two places:

A. Supabase

1. Go to Supabase > **Authentication** > **URL Configuration**.
2. Set **Site URL** to your Vercel URL (e.g., https://tristar-pt-flowsheets.vercel.app).
3. Add the same URL to **Redirect URLs**.

B. Azure AD

1. Go to Azure AD > your app registration > **Authentication**.
2. Under Redirect URIs, make sure the Supabase callback URL is there:

```
https://xfymaficakhjoxhiqjlf.supabase.co/auth/v1/callback
```

Step 6: Set Your Account as Admin

After signing in for the first time, your profile will be created as 'Therapist' by default. To make yourself an Admin:

1. Go to Supabase > **Table Editor** > **profiles**.
2. Find your row (by email) and change the **role** column to **Admin**.
3. Refresh the app. You'll now see Audit Log and Settings in the sidebar.

You're all set! Your app is now live with:

- **Real-time Supabase database** (no data loss, auto-backed up)
- **Microsoft SSO** (staff sign in with work accounts)
- **Vercel hosting** (auto-deploys when you push to GitHub)
- **Row Level Security** (HIPAA-aligned access controls)
- **Mobile responsive** (works on phones, tablets, desktops)
